

# Model

**Package X**

```
graph LR; subgraph Model; PackageX[Package X]; end; PackageX --> ClassA[Class A]; PackageX --> ClassB[Class B];
```

The diagram illustrates a UML Package Diagram. A large rectangle represents the 'Model' package. Inside the 'Model' package, there is a smaller rectangle labeled 'Package X'. To the right of 'Package X', there are two separate rectangles labeled 'Class A' and 'Class B'. Both 'Class A' and 'Class B' are contained within the 'Model' package. The 'Class A' and 'Class B' rectangles are divided into three horizontal sections, with the top section containing the class name and the bottom two sections being empty.

**Class A**

**Class B**
